Lighting solutions for walls, ceilings,
floors and more

Universal LED profiles

Discover the versatility of LARS Universal LED Profiles - designed to bring modern lighting concepts to life. Combining premium aluminium quality, elegant design, and reliable performance, our profiles offer the perfect solution for residential, commercial, retail, and architectural applications. With a wide selection of shapes, sizes, and mounting options, LARS makes it easy to create seamless, professional lighting installations that enhance any space.

Diffusers

The LM, LR, LF, LB, LP and LS profiles are available in four variants:

CLEAR

Light transmittance: 99%

Ideal for applications requiring maximum brightness with minimal light loss.

FROSTED

Light transmittance: 70%

Provides a soft diffusion effect while maintaining high light output. A great choice when you want to reduce glare without significantly decreasing brightness.

OPAL

Light transmittance: 50%

Creates a smooth, evenly diffused light for a uniform linear lighting effect.

In LR, LB, LP, LS, and LAP profiles, the opal diffuser effectively conceals individual LED points, delivering a continuous line of light.

SHADOWLINE

Light transmittance: 30%

Designed for premium architectural applications in dark interiors such as cinemas, theatres, clubs, hotels, and restaurants.

The black diffuser keeps the profile discreet when switched off, revealing a striking line of light only when illuminated.

LM

The LA profile is designed for installation in corners where two surfaces meet. It is ideal for decorative lighting and can be mounted under cabinets, along skirting boards, and on ceilings.

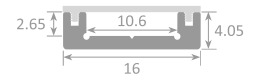

Profile colours:  

LM SLIM

The LM Slim profile is the smallest profile in the range. With a height of just 4.05 mm, it is available in black and silver anodised aluminium finishes. Its compact dimensions make it ideal for discreet lighting applications on surfaces such as walls, furniture, shelves, and other areas where a minimal profile appearance is required.

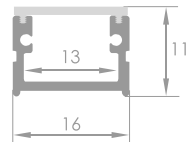

Profile colours:  

LR

The LR profile is widely used in interior lighting applications, including kitchens, corridors, and living spaces. It is also a popular choice for architectural and stage lighting, where it highlights the lines of ceilings and walls.

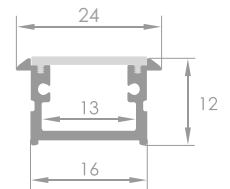

Profile colours:  

LB

LB is a recessed LED profile designed for illuminating cabinets, architectural features, and ceilings. It is available with a linear lighting option that conceals individual LED points for a continuous line of light.

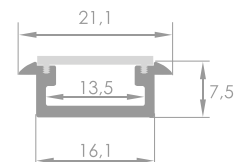

Profile colours:  

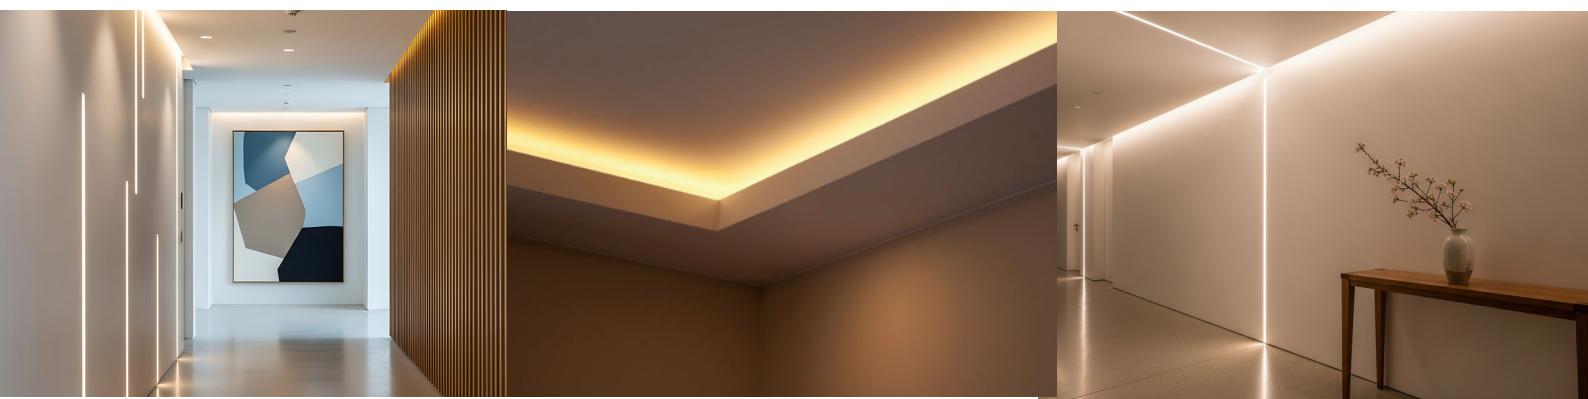

LF

LF is our smallest recessed LED profile, designed for applications with limited installation depth. Its compact dimensions allow it to blend seamlessly into the surface while delivering efficient, high-quality illumination.

Profile colours:  

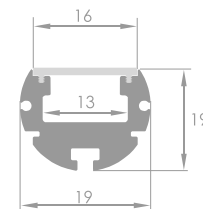

LP

LP is a modern LED profile with a rounded cross-section. It is widely used in furniture, walls, and architectural detailing, and can also serve as a wardrobe hanging rail with integrated lighting.

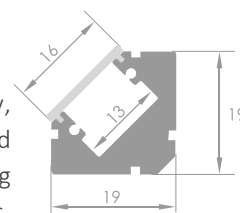

Profile colours:

LS

LS is an angled LED profile that directs light precisely, making it ideal for highlighting floors, ceilings, and walls. It is also an excellent choice for illuminating sculptures, displays, furniture, and exhibition spaces, adding depth and visual impact.

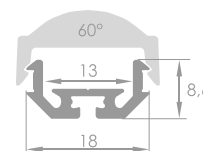

Profile colours:

LT

LT is a recessed profile featuring a curved diffuser that provides a wider 60° light distribution than standard flat diffusers. Its elegant design and distinctive lighting effect make it a popular choice for architectural interiors, as well as cinemas and theatres.

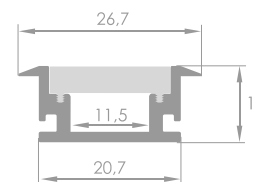

Profile colours:

LD

LD is a waterproof recessed LED profile with an IP54 protection rating. It is suitable for kitchens, bathrooms, and demanding applications such as roofs and façades, where it is used to accentuate architectural lines and decorative features.

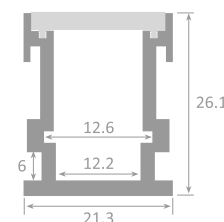

Profile colours:

LD XL

LD XL is a Universal LED profile designed for both indoor and outdoor applications. Manufactured from high-quality aluminium with a silver anodised finish, it is ideal for illuminating stairs, floors, gardens, bathrooms, corridors, balconies, and other architectural spaces.

LA

The LA profile is intended to be installed in corners where two surfaces come together. It works perfectly for decoration purposes and can be mounted under cabinets, foot of the walls and ceilings.

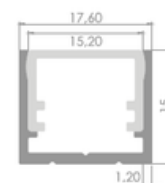

Profile colours:

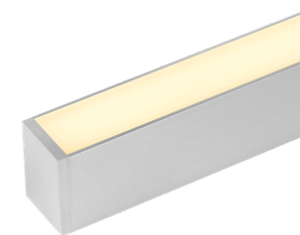

LA 3

The LA3 profile is 15 mm high and is available in silver or black anodised aluminium with an opal diffuser. Thanks to its adjustable end caps, it is ideal for illuminating cabinets, display cases, and other surfaces requiring precise light direction.

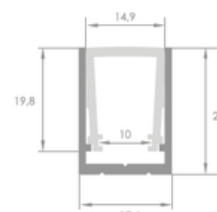

Profile colours:

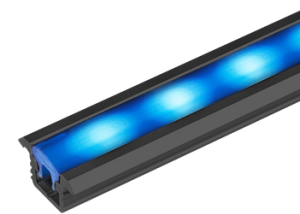

LAP

The LAP profile features a large illuminated surface. Thanks to the increased distance between the LED strip and the diffuser, it delivers a continuous line of light with no visible LED points, even when using LED strips with lower LED density. This makes the LAP profile one of the most popular choices among architects.

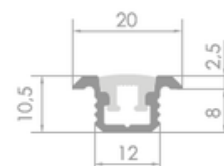

Profile colours:

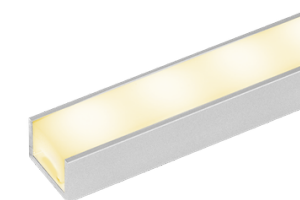

SIMPLE 1

Simple 1 is a recessed LED profile for indoor applications. Its key advantage is its minimalist design, requiring no end caps or special mounting brackets. It is designed to be recessed into flat surfaces such as walls, floors, and countertops.

Profile colours:

SIMPLE 2

Simple 2 is a surface-mounted LED profile for indoor applications. Like Simple 1, it offers a simple installation without the need for end caps or special mounting brackets. It is ideal for walls, countertops, furniture, and cabinetry, but is not intended for recessed installation.

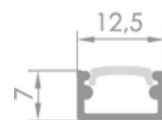

Profile colours:

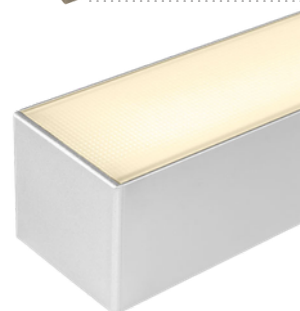

SIMPLE PCV

Simple PVC is the only plastic profile in the LARS range. Available in three colours to match different furniture finishes, it is also suitable for installation on walls and floors, as well as for highlighting steps, edges, and corners.

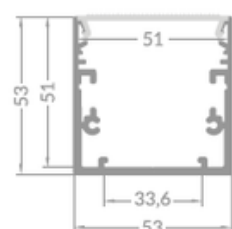

Profile colours:

JUMBO

The Jumbo profile belongs to our large-format profile range and offers exceptional design flexibility. It can be used as a suspended decorative luminaire or as a surface-mounted fixture. Its generous dimensions allow the LED strip to be installed at different heights using an additional aluminium mounting bracket, making it easy to achieve the desired lighting effect.

Profile colours:

Made of aluminium

Original end caps and mounting kit

Easy-ON diffuser

Indoor mounting

Linear effect option (no LED points visible)

Shadowline option

Recessed LED profile (to be embedded in the surface)

Wide-angle light distribution

Waterproof

Outdoor mounting
